SUMMARY

Product Engineer who owns features end to end — from talking to users and shaping the roadmap to writing production Python, designing REST APIs, and embedding Generative AI into the product. 3.5+ years shipping software across product, HR-tech, and banking teams, grounded in Object-Oriented design, CI/CD, and SQL performance tuning. I measure success by customer impact over lines of code — making independent design and UX calls, iterating fast on feedback, and rebuilding when the data points to a better solution.

3.5+ years shipping products · 3 companies shipped for · 40% manual ops cut for customers · 50% qa effort automated away

EXPERIENCE

Product Engineer — Denalix Tech LLC

June 2025 — Present

Cleveland, USA

- Own product features end to end — from talking to users and shaping the roadmap to writing full-stack code, shipping to production, and supporting customers directly.
- Translate customer pain points and business requirements into working software, making independent design and UX decisions to build experiences that solve real problems.
- Build and ship production Python services and REST APIs, embedding Generative AI / LLM capabilities into the product to automate workflows and unlock new features.
- Prioritize against the product roadmap, estimate technical effort, write clear technical specs, and keep quality high through code review and automated testing in CI/CD.
- Measure success by customer impact over lines of code — iterating fast on user feedback and rebuilding when the data points to a better solution.

Stack: Python · REST APIs · Generative AI · Product · CI/CD · Azure

Product Development Engineer — Phenom People

Jan 2022 — Aug 2023

Hyderabad, India

- Built an HR AI virtual assistant on the Rasa stack — job discovery, FAQs, candidate pre-screening, interview scheduling, and personalized job recommendations.
- Developed and optimized RESTful APIs (GET / PATCH / DELETE) for client-specific bot configuration, cutting manual intervention by implementation teams by 40%.
- Designed an API automation framework with Karate covering every bot-team service, reducing manual QA effort by 50% and accelerating the deployment lifecycle.
- Integrated multi-channel experiences — Web, SMS, MS Teams, WhatsApp, Facebook — with event-driven architectures for seamless data flow across systems.
- Enforced code quality via PyTest, Pylint, and SonarLint on Git/GitHub with Jenkins CI/CD; led OOP-based internal-gig business logic and its integrity constraints.

Stack: Python · Sanic · Rasa · REST · MongoDB · SQL · Jenkins · Karate

Associate Software Engineer — Achala IT Solutions

Apr 2021 — Dec 2021

Hyderabad, India

- Contributed to the end-to-end SDLC of high-availability banking production systems, holding to strict security and performance standards.
- Developed robust REST APIs for seamless data exchange with third-party banking modules.
- Built automated background schedulers for high-volume batch processing and system monitoring.
- Optimized complex queries and relational data models for integrity and responsiveness under heavy load.

SELECTED PROJECTS

HR AI Virtual Assistant — Conversational AI that screens, schedules, and recommends jobs for thousands of candidates. *(Rasa, Python, NLP, Chatbot)*

Bot Configuration Platform — Self-serve REST APIs that cut manual bot configuration work by 40%. *(REST, Sanic, MongoDB, Microservices)*

Karate API Automation Suite — BDD-style API test coverage for every bot-team service — QA effort down 50%. *(Karate, BDD, Jenkins, CI/CD)*

Internal Gigs Platform — OOP business logic for company-internal short-term jobs with airtight integrity rules. *(Python, OOP, Domain Logic)*

Banking Backend Services — High-availability backend features for production banking systems. *(Java, Spring Boot, Schedulers, SQL)*

GenAI Product Features — LLM-powered workflows embedded directly into a live product. *(Generative AI, LLM, Python, Azure)*

SKILLS

Languages & Databases: Python, SQL, MongoDB, Bash, Java

AI & Cloud: Generative AI / LLMs, Claude Code / AI Tooling, Rasa / Chatbots, Azure

Backend & APIs: REST API Design, Sanic / Microservices, Event-driven Architecture, Spring Boot

Quality & Tooling: Karate API Automation, PyTest / Unit Testing, Jenkins CI/CD, Git / GitHub

EDUCATION

M.S., Computer and Data Sciences — Case Western Reserve University Aug 2023 — May 2025
Cleveland, USA

B.S., Computer Science Engineering — IIIT — RK Valley, RGUKT (Rajiv Gandhi University of Knowledge and Technologies) Aug 2016 — Oct 2020
Andhra Pradesh, India

Graduate focus areas: Data Engineering, Machine Learning, Distributed Systems, Data Privacy & LLMs, Algorithms

CERTIFICATIONS

- Data Engineering Nanodegree — Udacity
- Data Streaming Nanodegree — Udacity
- Data Structures & Algorithms Nanodegree — Udacity
- Programming for Data Science with Python — Udacity
- Python Data Structures — Coursera
- Implementation of Data Structures — IIT Bombay
- Object Oriented Programming — IIT Bombay
- Algorithms — IIT Bombay
- MTA: Programming Using Python — Microsoft
